

# CNC Quick Coupler

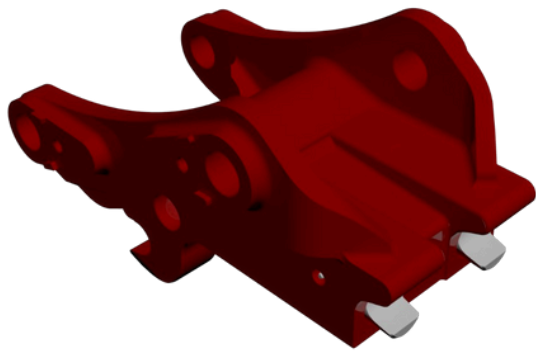

## CAPACITIES

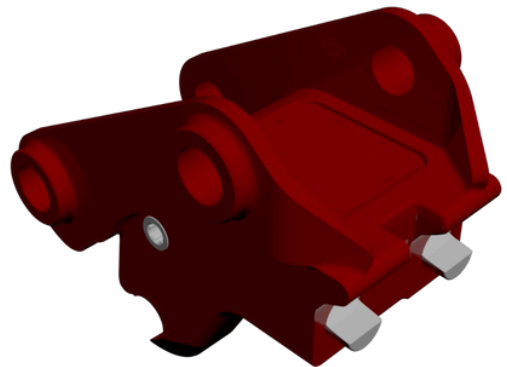

the Quick-Change attachment lets you change attachments in minutes so you can keep working. With the quality standards we have achieved in production, our experience in the field and the quality of the materials we use, you can use our Quick-Change attachments for many years safely and without any problems. You can find our Quick-Change attachment for construction machines of different classes in our product range. We also have Hydraulic and Mechanical locking systems. While the operator can change the attachment without leaving the machine using our Hydraulic Locking systems, the advantages of Mechanical Locking systems are lower production costs, quicker changing of the attachment and no additional hydraulic connection is required.

## FEATURES OF QUICK-CHANGE ATTACHMENT

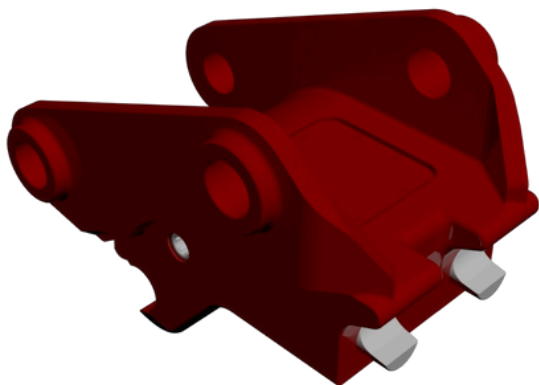

- The main body of our quick-change systems is high-strength, heat-treated steel casting.
- Our productions are made with very narrow tolerances on precision CNC benches.
- The parts in the mechanism are produced with appropriate material/heat treatment/coating techniques, considering the loads they will be exposed to.
- Arm distance is minimum in our system; this offers minimum loss of breakout power and fuel economy. Kinetic energy loss is minimal.
- Installation of the system on the machine is very practical. Your change is completed safely in under a minute.
- Its service life is very long compared to other systems.
- Continuous spring pressure compensates for gaps due to use over time.
- Mechanical and hydraulic locking system alternatives are available.
- Different sizes are available for Machines classified from 1-40 Tons
